Fleetline Expands Poly Fender Offering

Springfield, TN (December 5, 2017)

Fleetline is pleased to announce that our newly added wide base tire poly fenders are now available through all original equipment dealerships in the US and Canada. The fenders are an excellent alternative to customers that need a cost-effective spray suppression solution for wide base tire applications. They are designed specifically for use with wide base tires making them an ideal fit for fleets looking to reduce costs and improve fuel savings.

The new fenders are 19" wide and constructed of a lightweight high density polyethylene that is extremely durable with UV and corrosion resistance. They are available in single axle, half and full tandem designs. These products, in comparison to stainless steel versions, are less expensive with a weight savings of more than 50%. Less weight means more freight and better fuel economy.

"Wide base tire technology has improved significantly over the years resulting in more fleets operating with these tires." said Kyle Denu, President of Fleetline. "We feel our super single fenders compliment these advances by providing fenders that are lightweight and designed to reduce fuel consumption."

Fleetline is the Spray Suppression Leader in the USA. With a full line of products to fit all major manufacturers' trucks and trailers, you can count on Fleetline for unparalleled quality and exceptional value. Fleetline is a Marmon Highway Technologies LLC/Berkshire Hathaway company.
